

ELECTRO LUBE®

Give sticking tissue the slip by using Electro Lube®. Sterile and ready-to-use, Electro Lube is a non-toxic solution designed to be used in electrosurgery and electrocautery to keep tissue from sticking to the electrode tip during use. If your tips could talk, they'd thank you.

ABOUT:

- 4ml bottle with radiopaque foam pad
- Reduces charring and eschar build-up on the electrode tip
- Clinically proven to save time and reduce hand-backs¹
- Helps improve reprocessing for reusable cautery tips
- Single use
- 20/box

FAQs:

What is Electro Lube made of?

Electro Lube is a non-toxic solution made from a fatty acid (a biocompatible phospholipid) similar to what the human body produces naturally.

When can you use Electro Lube?

Electro Lube is used for a procedure that includes the use of electrodes to cut or cauterise tissue.

Is Electro Lube Sterile? How is Electro Lube sterilised?

Yes, it is sterile and ready-to-use. Electro Lube is sterilised by gamma irradiation at a certified vendor facility.

Can we re-use Electro Lube?

No. Electro Lube is labelled for single use only.

How often does Electro Lube need to be applied to an instrument?

This depends on the procedure. For most procedures, coating the instrument tip once prior to operating is sufficient. However, some surgeries may require an additional application. For proper application steps and further instructions, please follow the IFU.
