

POLYPECTOMY SNARES

Polypectomy Snares are used endoscopically in the removal of diminutive polyps, sessile polyps, pedunculated polyps and tissue from within the GI tract. Available in multiple styles (oval, mini-oval, or hexagonal) to suit your procedural needs.

ABOUT:

- Self-contained metal loop that is opened over the polyp and then closed to capture and remove the polyp tissue
- Available in the most preferred styles: oval and hexagonal
- Braided wire combines the strength of a firm snare with the flexibility of a soft snare to help with accurately capturing tissue. This combination can also help reduce the need for additional snare inventory in the GI suite
- Sterile
- Single Use
- 10/box

PRODUCT CODE	STYLE	BIOPSY CHANNEL	WORKING LENGTH	SNARE DIAMETER	
EN10300	Stiff Multi-Wire, Hexagonal	2.8mm	2300mm	10mm	
EN10301	Stiff Multi-Wire, Hexagonal	2.8mm	2300mm	15mm
