

INSTRUMENT PROTECTION

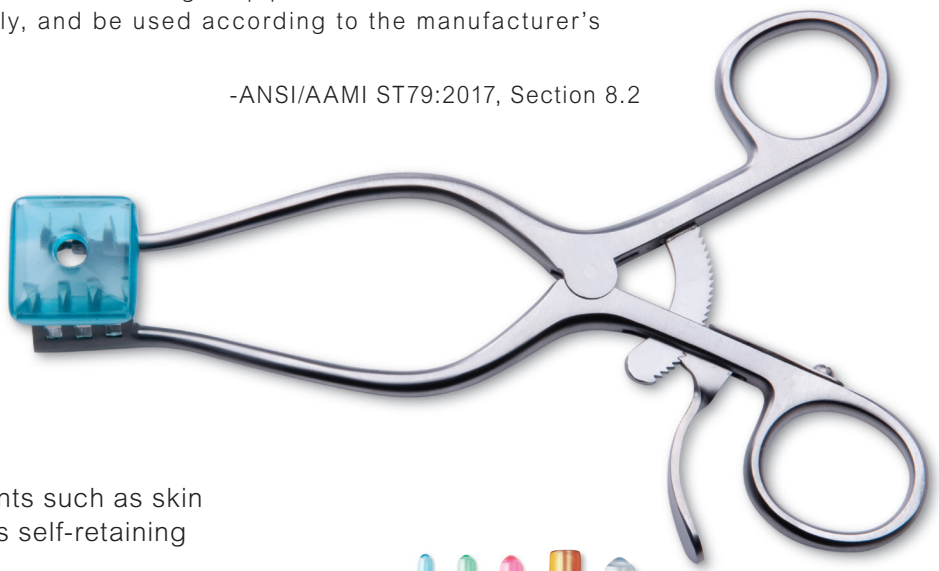

Key Surgical® Instrument Protection is designed to help extend the life of your instruments by protecting the sharp or delicate ends from damage during sterilization, storage, and transportation. Protection products, such as tip caps, also help guard your staff against sharps injuries during handling of surgical instruments.

“Sharp items should be protected from damage. Tip protectors, if used, should be steam-permeable, fit loosely, and be used according to the manufacturer’s written IFU.”

-ANSI/AAMI ST79:2017, Section 8.2
