

TOOTHBRUSH-STYLE CLEANING BRUSHES

Effective manual cleaning requires using effective manual tools. Choose from various toothbrush-style cleaning brushes designed to remove debris/soil/bioburden on external surfaces. Double-ended, single-ended, or angled... these brushes deserve a spot in your sterile processing 'toolkit'.

- High-quality cleaning brushes designed specifically for cleaning external surfaces of surgical instruments
- Choose from a variety of bristle materials (nylon, extra rigid nylon, brass, soft stainless steel, stainless steel) and styles (single-ended, double-ended, double-headed) depending on specific cleaning needs
- Ergonomic handle and angled heads help provide a comfortable grip and control during use

	Product No.	Description	Qty
A	N2221	Extra rigid nylon bristles, double-ended	2
B	N2121	Nylon bristles, double-ended	2
C	S2121	Stainless steel bristles, double-ended	2
D	N2100	Nylon bristles, single-ended	3
E	B2100	Brass bristles, single-ended	3
